| Black  |                                  | mm     | 2 x 80 x 10  |
|  |                                  |        | These are values used in separate switchgear. The actual values will depend on<br>the temperature around the circuit-breaker, which is influenced by the ambient<br>temperature, the degree of protection (IP), the mounting height, the partitions, and<br>any external ventilation. Depending on the specific switchgear design, this may<br>result in derating, which can then be compensated for by increasing the cross-<br>sectional area. Temperature rise tests in the specific switchgear can provide<br>specific and detailed information. |

## Design verification as per IEC/EN 61439

| Design vernication as per ILG/LIV 01455  |                  |    |  |
|--|------------------|----|--|
| Technical data for design verification   |                  |    |  |
| Rated operational current for specified heat dissipation   | In               | А  | 2000   |
| Equipment heat dissipation, current-dependent  | P <sub>vid</sub> | W  | 150  |
| Operating ambient temperature min.   |                  | °C | -25  |
| Operating ambient temperature max.   |                  | °C | 70   |
| IEC/EN 61439 design verification   |                  |    |  |
| 10.2 Strength of materials and parts   |                  |    |  |
| 10.2.2 Corrosion resistance  |                  |    | Meets the product standard's requirements.                         |
| 10.2.3.1 Verification of thermal stability of enclosures   |                  |    | Meets the product standard's requirements.                         |
| 10.2.3.2 Verification of resistance of insulating materials to normal heat   |                  |    | Meets the product standard's requirements.                         |
| 10.2.3.3 Verification of resistance of insulating materials to abnormal heat and fire due to internal electric effects |                  |    | Meets the product standard's requirements.                         |
| 10.2.4 Resistance to ultra-violet (UV) radiation   |                  |    | Meets the product standard's requirements.                         |
| 10.2.5 Lifting   |                  |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.2.6 Mechanical impact   |                  |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.2.7 Inscriptions  |                  |    | Meets the product standard's requirements.                         |
| 10.3 Degree of protection of ASSEMBLIES  |                  |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.4 Clearances and creepage distances   |                  |    | Meets the product standard's requirements.                         |
| 10.5 Protection against electric shock   |                  |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.6 Incorporation of switching devices and components   |                  |    | Does not apply, since the entire switchgear needs to be evaluated. |
| 10.7 Internal electrical circuits and connections  |                  |    | Is the panel builder's responsibility.                             |
| 10.8 Connections for external conductors   |                  |    | Is the panel builder's responsibility.                             |
| 10.9 Insulation properties   |                  |    |  |
| 10.9.2 Power-frequency electric strength   |                  |    | Is the panel builder's responsibility.                             |
| 10.9.3 Impulse withstand voltage   |                  |    | Is the panel builder's responsibility.                             |
| 10.9.4 Testing of enclosures made of insulating material   |                  |    | Is the panel builder's responsibility.                             |
|  |                  |    |  |

| 10.10 Temperature rise              | The panel builder is responsible for the temperature rise calculation. Eaton will provide heat dissipation data for the devices. |
|-------------------------------------|--|
| 10.11 Short-circuit rating          | Is the panel builder's responsibility. The specifications for the switchgear must be observed.                                   |
| 10.12 Electromagnetic compatibility | Is the panel builder's responsibility. The specifications for the switchgear must be observed.                                   |
| 10.13 Mechanical function           | The device meets the requirements, provided the information in the instruction leaflet (IL) is observed.                         |

## **Technical data ETIM 6.0**

Low-voltage industrial components (EG000017) / Switch disconnector (EC000216)
