Axioline F XC, Function module, 2 digital pulse interfaces for evaluating magnetostrictive position sensors with start/stop interface, Transmission speed in the local bus 100 MBit/s, Degree of protection IP20, including bus base module and Axioline F connectors

## Product description

The module is designed for use within an Axioline F station. It is used to evaluate magnetostrictive position sensors with start/stop interface. The module determines the position by measuring the runtime of one or more mechanical waves in the connected magnetostrictive position sensors. Using the known propagation velocity of these mechanical waves, the module calculates the position of the magnets on the magnetostrictive position sensors. The positions are determined asynchronously to the Axioline F local bus.

## Your advantages
